

INVENOVA

STORAGE

Invenova as a company

What we are trying to achieve?

Design solutions that improve operability and maximize the performance of the supply chain.

How do we achieve this?

We work with our clients to design, build and deploy turnkey projects for distribution centers.

Why are we the ideal supplier?

We have more than 35 years of experience on sortation, material handling, storage, control, and intralogistics.

We have dozens of fulfilled projects worldwide that backup our experience and quality.

What do we guarantee?

We add value to our clients by optimizing their supply chain. Put at your disposal our commercial and technical infrastructure in various parts of the world and a team of professionals who guarantee the quality of projects from start to finish every day.

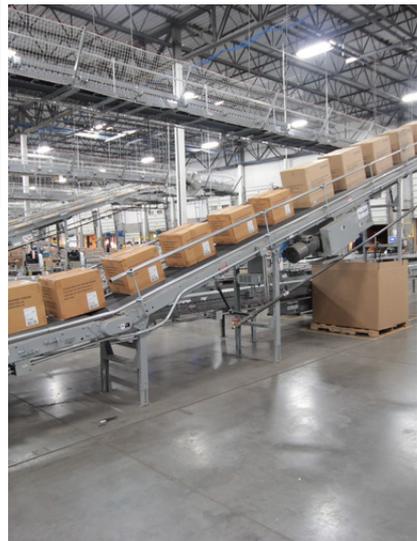

Adding value to your logistical solutions.

Smart Technology

Sorting Solutions

We have a variety of high-capacity solutions to distribute materials to multiple destinations. We can provide you with the best solution considering an optimal ROI.

MEZZANINE

 Metal mezzanine structures that allow efficient use of the useful height of the warehouse. They are mainly used to duplicate the areas where they are installed.

 These solutions can be complemented with a variety of equipment like: shelves, assortment lines, conveyors, etc.

**Quick and simple
assembly**

**Taking advantage
of available spaces**

Reusable

SHELVING

 Storage system designed for medium and heavy loads, whose handling unit are generally palletized products. The definition of the design is subject to the characteristics of the load units.

 These systems take advantage of the useful height of the warehouse they are installed in.

Greater inventory capacity

Taking advantage of available spaces.

Operation order

PASSARELLA

 Multi-level storage system, generally supported by a Selective Rack structure or a shelf on two or more levels. They are mainly used to increase the capacity of an specific area without losing the availability of picking the material for its rapid supply.

**Maximum use of
warehouse height**

**Good capacity
and availability
ratio**

**Avoid
picking risks**

AS / RS

Automated systems for pallet storage. Requires induction and extraction zones of the products. They are high density stock systems.

They are usually installed in freestanding warehouses 30m high and are controlled by its own WCS.

Automated system

Maximizes pallet stock capacity

Can be sequenced with assortment processes

MINI LOADS

-  Automated systems for the storage of boxes. Requires induction and extraction zones of the products. They are systems of high density and availability of stock. Specific solution to work with boxes or containers of light loads, normally between 5 and up to 50 Kg per container.

**Automated
system**

**Maximizes boxes
stock capacity**

**Can be sequenced
with assortment
processes**

Success Stories

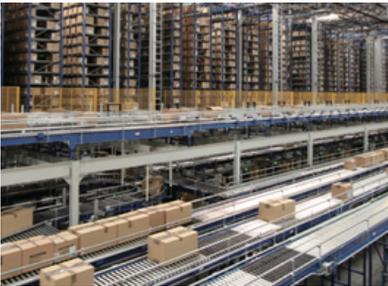

Julio

Mezzanine type solution with 2 floors and ready to expand to a 3rd floor. System designed to store and distribute hanging and flat garment with over head conveyor and PTL systems.

Yale

Mezzanine type solution with 3 floors. This solution gave Yale the possibility to increase y 4 times the amount of stock in the same area with a much efficient overhead conveyor system.

Skechers

Systems such as mini load AS/RSs, sorters, and conveyors, were installed to give a processing capacity of 25,000 pairs/hr. and handle over 100,000 SKUs, greatly reducing the necessary number of employees

Promoda

Project with multiple solutions: overhead conveyor with multiple storage levels for hang/flat garments, mezzanine structure with shelving for shoes sorting systems by Put To Light, e-commerce, and WMS.

We have strategic alliances with intralogistics leaders.

Carefully selected to add value to your projects.

Alliances

Cutting edge technology application.

DAIFUKU

Always an Edge Ahead

Worldwide systems on material movement.

**OPTIMUS
SORTERS**

Worldwide classification teams.

MOINSA

Innovative solutions on intralogistics.

**PACLINE
OVERHEAD CONVEYORS**

Improve productivity and efficiency through overhead conveyors.
